Repronomics research EBVs from the April 2021 evaluation identified the sire’s EBV to be above average, average or below average compared with other sires with 10 or progeny for the trait. Each category contains approximately a third of the sires (from all breeds), i.e. an above average sire is in the top 30% of Repronomics sires recorded for that trait. \*\* indicates the sire is in the top/bottom 3 of Repronomics sires
