Repronomics research EBVs from the
April 2021 evaluation identified
the sire's EBV to be above average,
average or below average compared
with other sires with 10 or progeny
for the trait. Each category contains
approximately a third of the sires (from
all breeds), i.e. an above average sire
is in the top 30% of Repronomics sires
recorded for that trait. ** indicates
the sire is in the top/bottom 3 of
Repronomics sires
